Aspiring Cybersecurity Engineer with Experience in DevOps and Cloud Technologies.

SUMMARY

Cybersecurity graduate with hands-on DevOps, infrastructure automation, and secure system development across cloud-native and embedded environments. Proven skills in building CI/CD pipelines, deploying Kubernetes-based applications.

EDUCATION

BS – Cybersecurity | *Fast National University of Computer and Emerging Sciences*

2021- 2025

TECHNICAL SKILLS

Languages: Python, C/C++, Solidity, **Databases:** MongoDB (NoSQL), MySQL (relational), **Cloud & DevOps:** AWS, Azure, Terraform, Kubernetes, Helm, Jenkins CI/CD Pipelines, Github Actions, Portainer, Docker, Prometheus, Grafana, Ansible, Cloudflare, FluxCD, Alertmanager. **Cybersecurity:** SOC analyst, Digital Forensics, Ethical Hacking

EXPERIENCE

Researcher – Internship

Jun 2024 – Jun 2025

- Researched and developed a lightweight Rank attack detection system for IoT networks using Contiki-NG

DevOps Engineer – Trifusion tech

Aug 2025 – Present

- Led **end-to-end** DevOps operations for **6+ clients**, owning architecture, automation, deployment, and reliability.
- Provisioned and maintained **100+ cloud resources** using Terraform, enforcing fully version-controlled **IaC**.
- Executed configuration management for **50+ VMs using Ansible**, ensuring consistent, repeatable and secure system.
- Operated and optimized production Kubernetes clusters with **HPA** and cluster auto-scaling, **hosting 6-7+ distributed services and microservices** with fault-tolerant and scalable architectures
- Programmed and maintained **CI/CD pipelines for multiple applications**, reducing deployment time and manual intervention.

DevOps Engineer – Teammate Technology

Aug 2025 – Present

- Engineered and managed **observability for 150+ VMs**, developing custom exporters to monitor service and system real-time.
- Administered **Kubernetes clusters via FluxCD**, implementing **GitOps workflows** and securing secrets using **SOPS**
- Configured **Cloudflare WARP tunnels** for an internal VPN, enabling secure **SSH access to all VMs via private DNS zones**, improving security and access control
- Ensured **end-to-end VM and service reliability**, proactively monitoring and resolving issues to maintain high availability and performance.
- Provisioned **multi-branch infrastructure** using **Terraform with Terraform Cloud workspaces** and Scheduled configurations via **Ansible** for scalable, consistent deployments.

PROJECTS

AWS to Azure Cloud Migration with Minimal Downtime

DevOps Project | Nov 2025

- Orchestrated **AWS → Azure migration** with **<1% service interruption**, operating **2 branches** across **2 Kubernetes cluster**.
- Architected AKS environments leveraging **Karpenter** with **Spot VM pools** in development environment, achieving **40–60% infrastructure cost reduction**.
- Constructed **multi-stage** Docker images for **6 services** and Integrated fully Automated **CI/CD pipelines** using **FluxCD**, integrating **Image Automation Controller** to manage end-to-end deployment lifecycle.
- Enabled full-stack **observability** covering **10+ VMs**, node pools, control plane, and workloads, utilizing **auto-discovery-based** metrics collection.
- Designed segmented Azure networking with **6+ VNets/subnets**, NSGs, and private routing aligned with best practices for security and scalability.

3-Tier Chat Application Deployment with CI/CD on Kubernetes

DevOps Project | July 2025

- Deployed a scalable **3-tier chat system** (React, Node.js, MongoDB) on K8s, managing **5+ pods**.
- Configured **NGINX Ingress Controller** to route traffic across services, achieving **99% uptime** during simulated load tests.
- Implemented an automated **CI/CD pipeline** with **Jenkins**, reducing manual deployment time by **80%** through integration.
- Ensured data persistence with **PVC-backed** and secured environment variables using Kubernetes **Secrets and ConfigMaps**

Multi-Environment Infrastructure Automation with Terraform & Ansible

DevOps Project | Aug 2025

- Built the project from scratch to manage **infrastructure provisioning and configuration** in a fully automated pipeline.
- Implementing **Terraform Workspaces** for isolated **dev**, **staging**, and **production** environments.
- Automated **Nginx installation** and server configuration via **Ansible roles**, achieving consistent environment setup with zero manual intervention.

End-to-End CI/CD Pipeline with Jenkins, SonarQube, Docker, and Monitoring Stack

DevOps Project | July 2025

- Engineered a fully functional CI/CD pipeline leveraging Jenkins Declarative Pipeline.
- Integrated **syntax checking** and **Pytest-based unit tests** to enforce code reliability.
- Containerized the application using Docker and deployed it via shell scripts and **Docker Compose**.
- Set up full observability using **Prometheus**, **Grafana**, and **Blackbox Exporter**, enabling real-time performance dashboards and uptime alerts with **<15s polling interval**.
